i. Presentation #3 Speech
1. The goal of this presentation was to inform you guys on what some of the skills that a graduating senior should have after they graduate. We hope this helps you all to better prepare for finding a job that you love. We didn't make these up, they are straight from Neil's mouth. So if you want a job with Comcast, you at least know what they are looking for and I'm sure that other companies will very similar. So let's go over these skills one more time very briefly.
   a. 2 compiled languages – java, c , go…etc. I personally know java and C#...they are very similar but nonetheless they are 2 compiled languages. Make sure you put this on your resume.
   b. 2 interpreted languages – javascript, python, ruby, perl, php. Now I personally have only ever practiced with javascript but I've seen and used enough Python to say that I 'know' it if anyone asks. IT's something that I could prolly pick up easily if I had to.
   c. Protocols – xml/json/rest/soap these are usually pretty easy to learn when forced.
   d. Know how to build a website from scratch- html/javascript- w3schools.com.
   e. Multi-threading – this is something that you should know the theory behind, but is hard to really understand till you have worked with it first hand.
2. So that about sums up what Neil specified. If you're interested in a job at Comcast, just make sure you have all those skills.
b. Resources that can be used to find a job. (ADAM)
   i. So now that you have the skills you need, it's time to find a job. A lot of jobs these days require that you have EXPERIENCE in the field. Well if you're just graduating, you most likely don't have a lot of experience. So a good place to start is the Internship Center here on campus. I didn't have any job experience in the industry, and I found a job very quickly and very easily.
   ii. LinkedIN
      1. Chris, and Matt Henry
   iii. Dice
   iv. Craigslist
      1. Mat Guest
